Lidocaine HCl 2% ([Image Source](#): Homo Interruptis, with Len Ber MD)

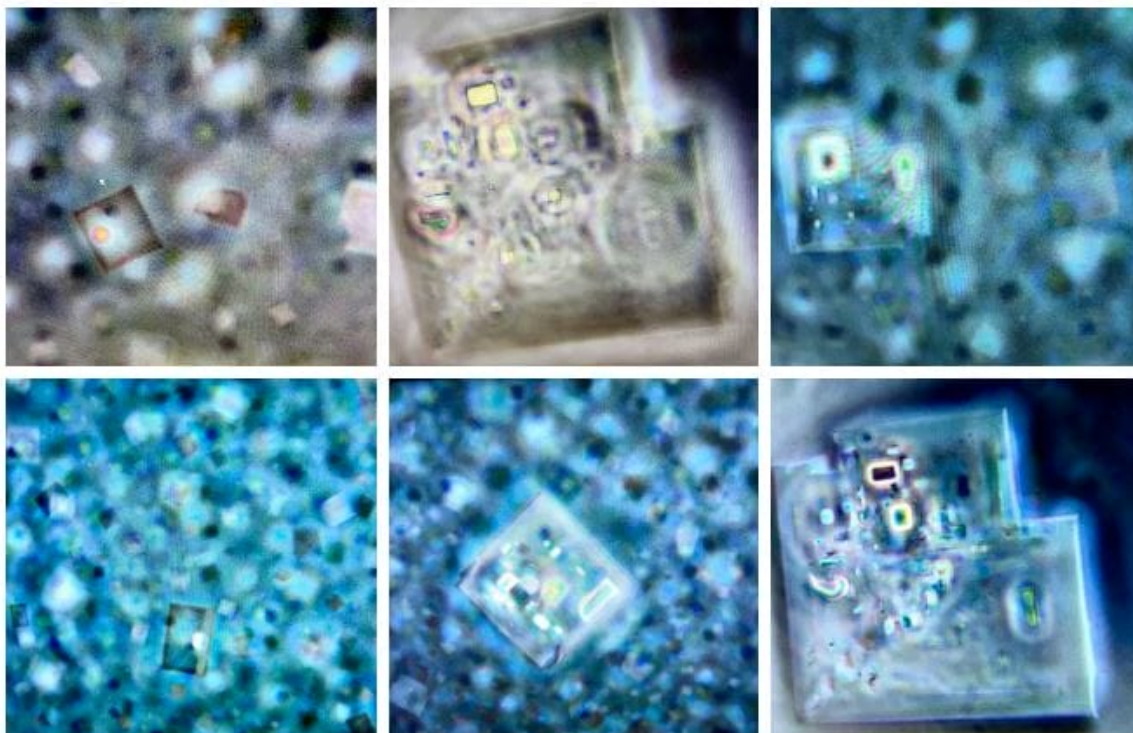

Every patient should be asking their dentist the question, “Is there Graphene in your dental anesthetic?” Sadly, most dentist probably haven’t a clue. And it may be up to patients to help them find out – and find a safe, workable alternative for local anesthesia.

(Graphene is a superconductor of electricity and amplifier of electromagnetism in the body. This means that it rewires electrical communication in the brain and it amplifies the effects of the electromagnetic ‘Cloud’ being projected from low-orbit satellites and by 5G towers. And [it’s in the Covid mRNA “vaccines”](#). Coincidence? Not a chance.)

Today’s first microscopic examination into self-assembly technology comes courtesy of national dental provider [Henry Shein, Inc.](#) The technique used is optical phase-contrast microscopy, magnification x100-200, after 22 hour incubation period. **A dentist from TX sent in ampules of anesthetics (images below) in hopes that his drugs are free from self-assembly technology.**

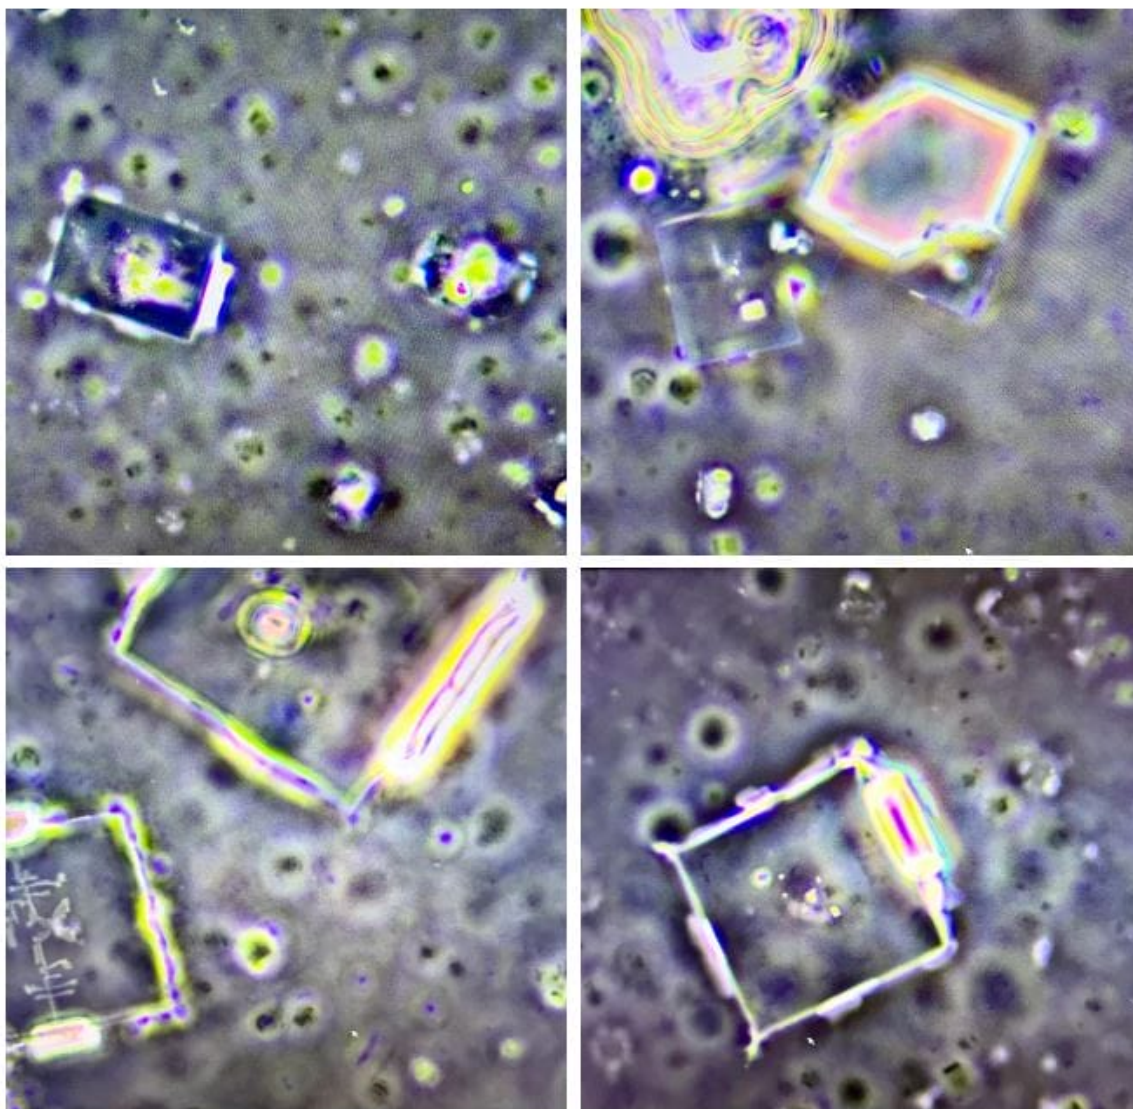

And the answer is the same: Yep, there it is! ([source](#))

I. Mepvacaine HCl 3%:

Mepivacaine HCl 3%

II. Lidocaine HCl 2%:

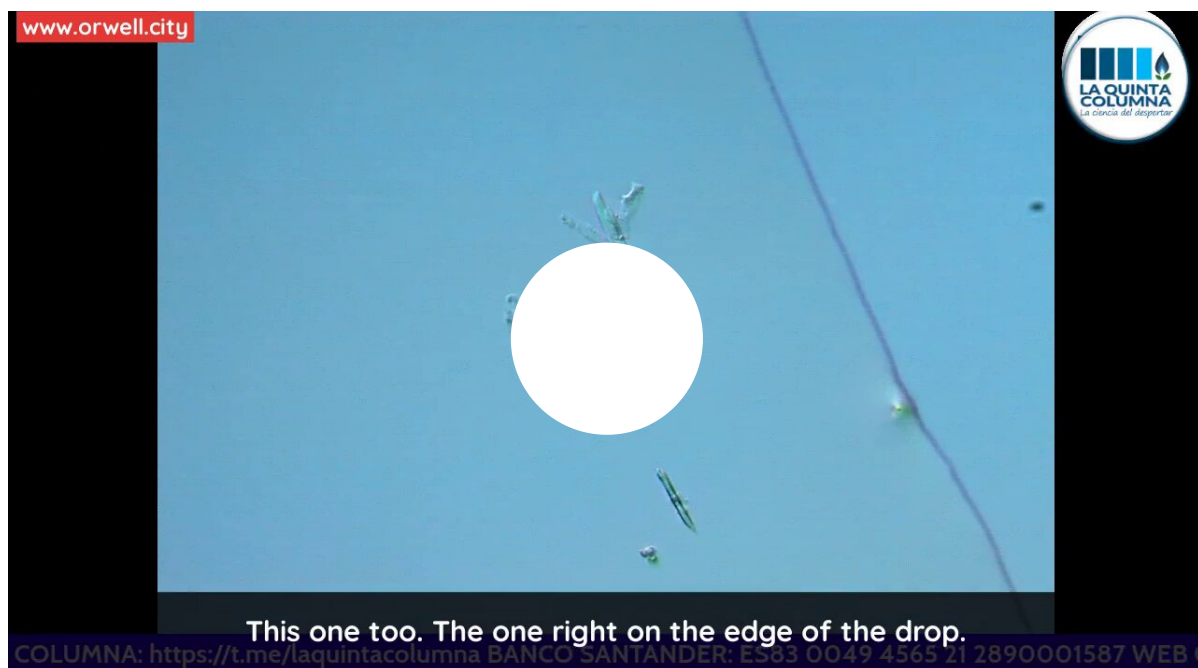

Lidocaine HCl 2% ([image source: Homo Interruptis, with Len Ber MD](#))

Dr. Len Ber (who provided the above images) [says](#) he is repeatedly asked a **question whether you can get a technology-free anesthetics**. ALL anesthetics that his domestic and international medical colleagues looked at contain this technology!

It was Ricardo Delgado, founder of [La Quinta Columna](#), who first brought our attention to graphene-oxide being added to Lidocaine, a dental injectable anesthetic – [Suspected presence of Graphene Oxide in injectable Lidocaine](#). Here is a short clip of the images in Delgado's very shocking October 2021 presentation.

Under 3 minutes. Read the subtitles for English.

Suspected presence of Graphene Oxide in injectable Lidocaine

As it turns out, the problem appears to be much more widespread than anyone could have imagined.

Dr. Lundstrom, a family dentist was able to get analysis of his dental anesthetics done at the University of Colorado, Boulder. He sent samples of **Articaine Hydrochloride 4%** and **Epinephrine 1:200,000**, lot number (10) 230109 for testing. The testing was completed using Raman Microspectroscopy. Jessica C. Hankins, Sr. Professional Research Assistant concluded:

“I can affirm the presence of graphene oxide particles in this anesthetic with high confidence.”

To give his patients answers, Dr. Lundstrom has posted the results to the question **“Is there Graphene in dental**

anesthetic?” on [his website here](#) (scroll down).

[This confirmation from Colorado](#) is very meaningful, because [the same self-assembly nanotechnology we found in the COVID bioweapons](#) IS IN dental anesthetics.

And according to Dr. Ana Maria Mihalcea, PhD., microscopy has shown [nanobots in the childhood vaccines MMR and Varicella, Insulin \(Lantus and Humalog\)](#), and other injectable drugs.

[Crazy Objects Found in Blood of the Vacc'd & In Vaccine Vials](#)

Everyone everywhere should know this to try and find some way around this as hard as that may be.

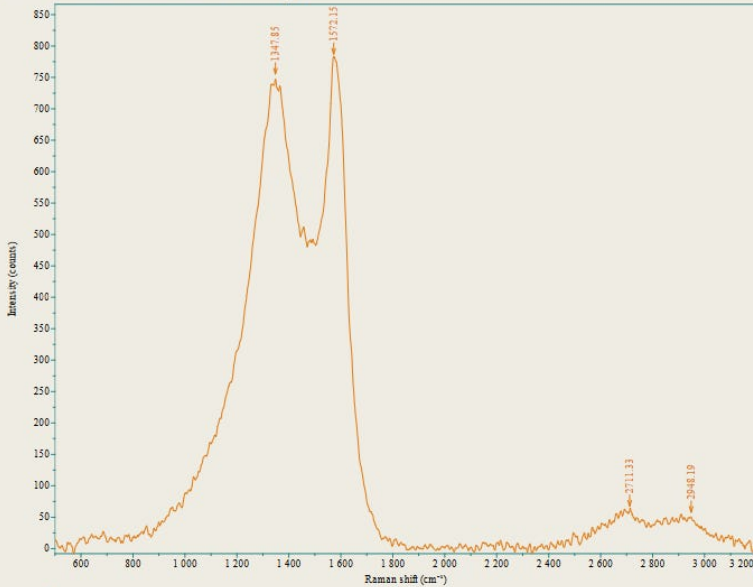

[Dr. Clifford Carnicom](#) was correct in his warnings all along, and gradually, rigorous scientific evaluations from reputable universities prove this point. The question is, what will humanity do about it? How can we continue to ignore the self-evident while harm is being done to our fellow humans?

You'll find the full Colorado [study results here](#).

Spectrum Results: Particle 1/3

▲ Graphene-like particle image acquired with transmitted light and 100x objective

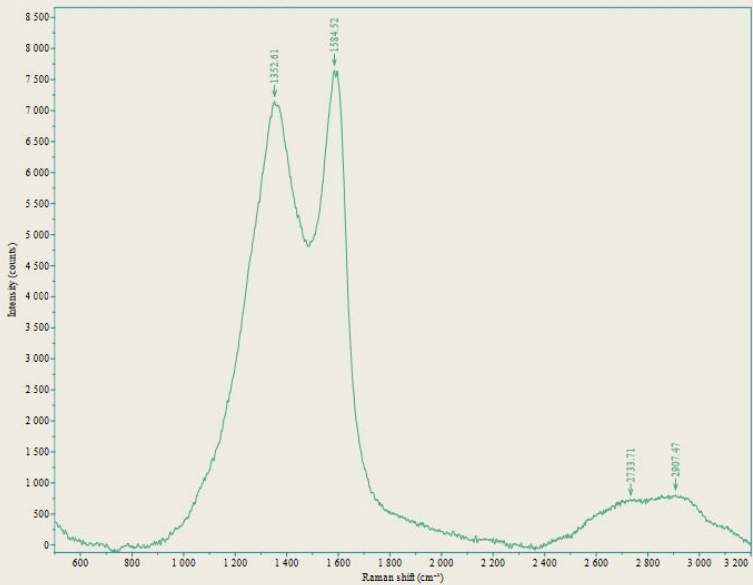

▲ Raman spectrum acquired from graphene-like particle. Peak positions (labeled) are associated with graphene oxide.

Spectrum Results: Particle 2/3

▲ Graphene-like particle image acquired with transmitted light and 100x objective

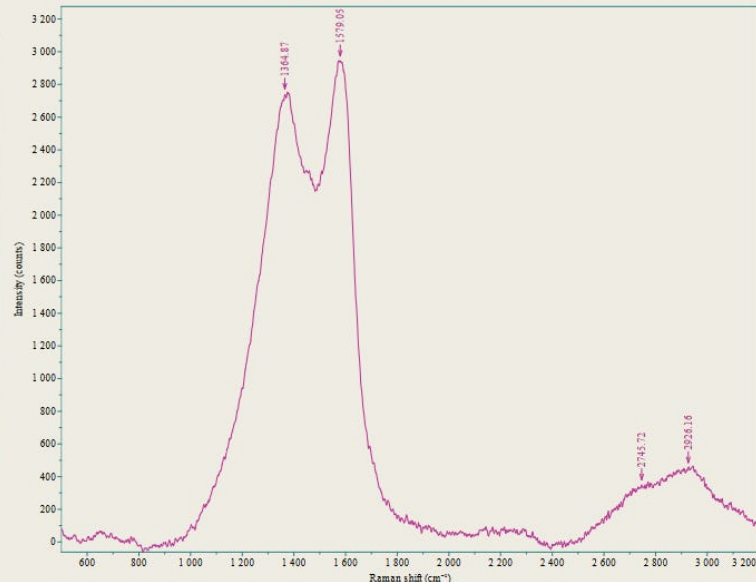

▲ Raman spectrum acquired from graphene-like particle. Peak positions (labeled) are associated with graphene oxide.

Spectrum Results: Particle 3/3

▲ Graphene-like particle image acquired with transmitted light and 100x objective

▲ Raman spectrum acquired from graphene-like particle. Peak positions (labeled) are associated with graphene oxide.

Conclusions

- Based on spectral results portraying D, G, and 2D peaks, I can affirm the presence of graphene oxide particles in this anesthetic with high confidence.
 - *Although I have confirmed the presence of graphene oxide in this anesthetic, the concentration or amount of graphene oxide particles in the anesthetic is unclear.*
- Spectrum acquired from the dried-liquid anesthetic produced inconclusive results, indicating a need for further testing for determination of lipid nanoparticles or hydrogels in the solution.

Excerpt by Dr. Ana Maria Mihalcea, PhD.

More evidence of graphene in dental anesthetics. It was found it in ALL the vials:

In April, 2023, different vials were examined in Gibraltar by a local dentist and scientist. When they [observed the graphene-signature threads and images](#) under the microscope, they both said, “This is insane. Note well: It should be a completely clear solution. We should NOT see anything in it.”

[Non Stop Spherical Rubbery Self Replicating Blood Clots After Dental Anesthetics – Assembly Stopped With EDTA IV+ Vitamin C – A Case Report](#)

Dr. Diana Wojtkowiak, PhD. in Poland also confirmed Graphene in dental anesthetics: [Torsion Spectroscopy Analysis Of Dental Anesthetics And Vitamin B12 Injections – 10 Out Of 13 Batches Contain Graphene](#)

For those who still don't believe this is factual, watch [this conversation](#) with Dental Surgeon Dr Juliana Varao and

Dr. Ana Maria Mihalcea, PhD. **Dr. Varao claims that we are “part of a real-life double-blind experiment” since one of the largest manufacturers of dental anesthetics (Septodont) “publicly” joined Moderna in 2023.** (at 26:25)
Some shocking documents verify it all.

1 hour.

Nanotechnology In Dental Anesthetics-Conversation W/ Dental Surg...

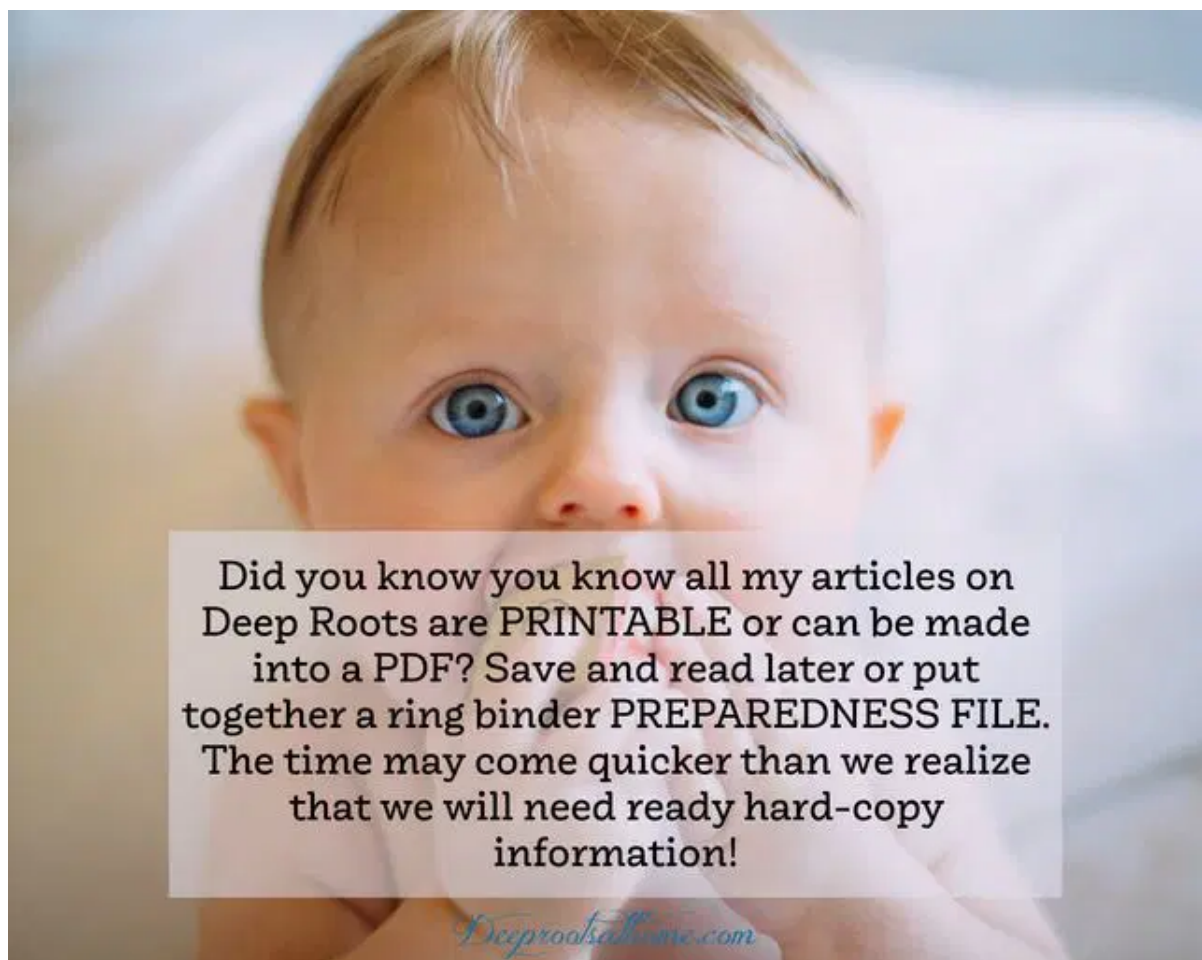

The silence from academics and health agencies is deafening.

PS: I will be digging in to see if there are any known viable dental anesthesia alternatives, so tune back in soon. [Here is the first article.](#)

“As for God—his way is perfect; the word of the LORD proves true; he is a shield for all those who take refuge in him.” ~Psalm 18:30

Hi! I'm Jacqueline!

Thanks for being part of this journey with me.

Welcome to my own little place on the internet! Home is where I love to be. I feel there is no greater place to incubate souls. These days you'll find me using my experiences here to write about herbal remedies and natural health research — a big passion of mine. But being a wife and mother is not easy. It is challenging and potentially lonely. I get that. I wanted to create a place to connect with and support other moms for creating a natural, healthy, and fulfilling home life.
